1	RFP	4		Can you please confirm what the department is expecting in the Technical Proposal for the bridge rehab on S-154. Currently in "Section 4.1 – Technical Proposal", under "Appendix A – Conceptual Plans", it lists the A.1 and A.2 appendices for Roadway and Bridge Plans. This language is standard from all other bridge packages previously procured by SCDOT but does not specifically call out any Bridge Rehab plans. The language is also the same as was used in the I-20 over Wateree DB project which had four rehab bridges as part of the project but did not require teams to submit any rehab plans in the technical proposal. This coupled with the fact that Conceptual Bridge Rehab plans for S-154 were included in Attachment B rather than the usual Project Information Package section of the RFP creates some confusion as to what you will be requiring in this Technical Proposal. Any guidance is appreciated	Structures	No_Revision	"The department is expecting conceptual bridge plans as listed in RFP Instructions Section 4.1, Appendix A.2, items "a" and "b". If the team does not intend to change anything on the conceptual bridge rehab plans in Attachment B for S-154, then the team may simply provide a statement in the proposal asserting that or change the consultant logo on the Attachment B plan set and attach them in the appendix."
