1. EXECUTIVE SUMMARY

This executive summary is intended as an overview for the convenience of the reader. This report should be reviewed in its entirety prior to making any decisions regarding this project.

F&ME Consultants, Inc. (FME) has completed an Asbestos Containing Material (ACM) Investigation of S-5-458 (Indian Camp Rd.) Bridge over Indian Camp Branch (Bridge) in Bamberg County, South Carolina at the request of the South Carolina Department of Transportation (SCDOT) (Client). The field investigation was performed on January 20, 2025, in anticipation of an on-alignment replacement of the existing Bridge. This investigation was also conducted pursuant to the South Carolina Department of Environmental Services (SCDES), United States Environmental Protection Agency (USEPA), National Emission Standards for Hazardous Air Pollutants (NESHAP), and Occupational Safety and Health Administration (OSHA) regulations requiring an ACM investigation prior to any demolition activities.

Per an agreed-upon scope of work, FME performed this investigation to identify ACM that might be encountered during the demolition activities associated with the existing Bridge, and to provide recommendations regarding proper handling and disposal of ACM found. The investigation of the Bridge identified no suspect materials associated with the existing Bridge. It should be noted that the Bridge was washed out during Hurricane Helene in September of 2024 and the original reinforced concrete piping (RCP) was no longer present. Therefore, at this time, no special handling or disposal requirements are required regarding ACM. However, during the course of demolition activities, previously concealed ACM might be discovered. If suspect ACM (i.e., bond break bearing pad materials) is found, the affected contractor(s) must stop work, take appropriate actions, and notify the Owner/Asbestos Consultant for an appropriate response action. The SCDES must be notified if any suspect ACM is discovered.

We sincerely appreciate the opportunity to assist you with this project. Should you have any questions or require additional information concerning this Investigation, please do not hesitate to contact our office at (803) 254-4540.

Sincerely,

F&ME CONSULTANTS, INC.

2. INTRODUCTION

FME has completed an ACM investigation of the S-5-458 (Indian Camp Rd.) Bridge over Indian Camp Branch in Bamberg County, South Carolina. The investigation was performed on January 20, 2025. This investigation was conducted pursuant to SCDES, USEPA, NESHAP, and OSHA regulations which require an ACM investigation prior to any demolition activities. Refer to Appendix A, Site Vicinity Map, for the location of the Bridge.

It is our understanding that the proposed project will include the complete demolition and removal of the existing Bridge and replacement with a new bridge along the existing alignment. The purpose of this investigation was to determine if asbestos was present on the existing Bridge by identifying and sampling suspect ACM, obtaining analytical results, quantifying any confirmed ACM, and assessing the physical condition of the ACM, where possible.

This report has been prepared exclusively for the Client and shall not be disseminated in whole or part to other parties without prior consent from the Client or FME. No other environmental issues were addressed as part of this report.

3. EXISTING BRIDGE STRUCTURE

The Bridge was formally located on S-5-458 (Indian Camp Rd.) and crosses over Indian Camp Branch in Bamberg County, South Carolina. The Bridge was completely washed away during Hurricane Helene in September 2024. No visible signs of the bridge components (RCP) were observed during this investigation. The washed-out Bridge was originally constructed with two (2) concrete drainage pipes, one 24-inch diameter pipe, and one 36-inch diameter pipe, laid side-by-side and then backfilled with soil. These RCPs were no longer present. Refer to Appendix A, Site Vicinity Map, for the location of the damaged structure.

Photo 1: The washed-out portion of the former S-5-458 Bridge over Indian Camp Branch in Bamberg County, South Carolina.

4. FIELD ASSESSMENT

The Bridge was washed out during Hurricane Helene in September 2024. During the investigation, accessible bridge components (i.e., expansion joints, etc.) were visually inspected for suspect ACM. Examples of possible suspect materials include bond break bearing pads, expansion joint material, and drainage scuppers. No suspect materials were observed/visible on the washed out remains of the original Bridge. Refer to the included Appendix B, General Bridge Plan. Also, refer to Appendix D, Site Photographs, for more details.

5. RECOMMENDATIONS

The results, conclusions, and recommendations of this Investigation are representative of the conditions observed at the site on the date of the field investigation. FME does not assume responsibility for any changes in conditions or circumstances that may have occurred after this investigation.

It is our understanding that the Bridge is to be demolished in anticipation of an on-alignment replacement of the existing Bridge structure. **No suspect materials were associated with the remains of the Bridge.** Therefore, there are no foreseen special handling or disposal requirements, regarding asbestos, that will be required for the demolition of this Bridge.

If any concealed and/or inaccessible suspect ACM (i.e., bond break bearing pad materials) are encountered during the demolition activities, the affected contractor(s) must stop work, take appropriate actions, and notify the Owner/asbestos Consultant for an appropriate response action. The SCDES must be notified if any suspect ACM is discovered.

This report has been prepared exclusively for the Client and FME and shall not be disseminated in whole or in part to other parties without prior consent from the Client and FME. Use of this document for bidding purposes is not recommended without prior consultation with FME.

We sincerely appreciate the opportunity to be of service to SCDOT in this matter. If you have any questions regarding the information presented herein, please contact our office at (803) 254-4540.
