## **Design Exception Attachment 1**

US1 over I-20 Interchange Improvement Project (P030711)

### **DESCRIBE ELEMENT(S) FOR DESIGN EXCEPTION(S)**

This project consists of operational and safety improvements for the interchange at US1 over I-20. The project originated as a bridge replacement project due to a structurally deficient bridge. As the project scope was developed, it became apparent that maintaining existing lanes of traffic on US1 during construction would require modifications to the interchange ramps and adjacent side roads. Since modifications are required, existing operational and safety deficiencies will be addressed with the project. The interchange improvement project will provide adequate horizontal clearances under the new bridge to accommodate any future widening of I-20 with full-width inside and outside shoulders. (See Attachment 4).

The existing project to reconstruct and widen I-20, Project P027003, will result in a facility with three lanes in each direction with a 4.75-foot inside shoulder and 12-foot outside shoulder for the majority of the project limits. (See Attachment 5). However, a design exception was approved for the on-going reconstruction and widening project at the US1 over I-20 interchange location for reduced inside (2'-9") and outside (6'-0") shoulder widths. (See Attachment 2). The basis for approval of the design exception considered the lack of increased crash histories at reduced shoulder sections as well as the context of the shoulder reduction being an isolated spot location.

This design exception justifies reducing the inside shoulder widths from 2'-9" (from the previous design exception) to 2'-3" to allow for an anticipated maximum 4'-0" diameter interior bent bridge columns to be constructed. The full 12-foot outside shoulder width will be provided with this project to eliminate the previously justified exception for outside shoulder width. (See Attachment 4)

### **JUSTIFICATION FOR DESIGN EXCEPTION(S)**

A review of the attached traffic crash report for the three year period along I-20 from MM 56.00 to MM 64.12 shows the most common type of accident was the rear end collision. (See Attachment 3). The three year period data, from July 2013 to July 2016, includes the period immediately prior to the beginning construction of I-20 widening project. These rear end collisions occurred throughout the study limits but the highest collision concentration was at the I-20/US 1 interchange apparently due to insufficient ramp lengths during peak hour travel times. These ramp lengths will be improved by the I-20/US 1 interchange improvement project and should reduce the number of collisions.

According to the report, most of median barrier collisions were involved with the median cable barrier (MM 56.00-60.30) where a wider median is available. There were less collisions with the concrete median barrier (MM 60.30-64.12), and these collisions occurred at various locations and not specific to the overpasses at US1/I-20, I-20/S-106, I-20/US 378, I-20/S-273, I-20/I-26, I-20/S-2892, and I-20/US 176. At these overpasses, the inside shoulder widths were less than 4 foot.

Based on review of the crash history for the project limits, including extended limits to capture interchanges with similar attributes, no apparent trends exist which indicate the reduced shoulder width has a negative impact on safety.

As noted in the section below, the cost to eliminate the design exception within the project limits would exceed \$8.5M dollars and would only provide full inside shoulder widths for a short segment of the interstate.

Given the results of the crash history review, the significant cost impacts of eliminating the design exception, the increased safety that will be provided with the interchange improvement project by providing operational enhancements, providing full outside shoulder widths on the interstate route and accommodating full inside shoulder width for any future widening project, approval of this design exception is justified.

#### DESCRIBE STEPS TO ELEMINATE DESIGN EXCEPTION(S), INCLUDE COST

To provide the required 10'-0" minimum shoulder width while allowing an interior bent/pier, eliminating the design exception would:

- require reconstruction of the newly constructed concrete pavement to eliminate pavement joints within the travel lanes;
- extend the project limits along the interstate to the east and west approximately 1000 LF in each direction to accommodate lane shifts;
- add significantly to the cost of the project.

The cost to construct the 10' inside shoulder widths will be approximately \$8.5M. This cost is based on reconstruction of the interstate travel lanes, shoulders, and the loop ramps in each direction.

The existing bridge is approximately 268' long consisting of 4 spans up to 70' in length and spill through abutments. The superstructure consists of Type III AASHTO girders supporting a 7 ½" deck thickness with an overall superstructure depth of approximately 4'-11". To eliminate the design exception by spanning the entire interstate would require a minimum span approximately 200' in length utilizing MSE wall abutments. Considering a minimum span to depth ratio of 0.040L, a steel girder depth over 8' would be estimated with 10' girder spacing. This span to depth ratio required by AASHTO LRFD Section 2.5.2.6.3 would require a significant grade increase along US1 in the order of 3 to 4 feet. This would significantly complicate traffic control on US1 during construction staging and potentially have significant impacts for access to businesses along the corridor. Only a steel plate girder would be a practical superstructure type for this span as girders over 120' long may be difficult to transport to the site. Thus a field splice with temporary supports would also be anticipated and further complicate traffic control during erection. While a single span may be possible for this location, a two span bridge with a pier in the median would be significantly less complicated to design and construct and is more consistent with standard SCUDOT practice. A two span would also lessen the necessary grade change to a more manageable level of approximately 1 foot.

#### HOW WILL FUTURE CONSTRUCTION IMPACT DESIGN EXCEPTION(S)?

Future construction of an 8-lane section on I-20 could provide a minimum 10' inside shoulder width to meet AASHTO and SCUDOT requirements. Given the current approved design exception and the resulting concrete pavement joint placement, the entire roadway structure would have to be reconstructed or

overlaid to eliminate pavement joints within the travel lanes. Approval of this design exception would be consistent with the previous decision to allow reduced inside shoulders and would not negatively affect any future widening. It should be noted, this proposed interchange improvement project will require adequate horizontal clearances be provided on the interstate under the overpass to accommodate any future 8-lane widening, including full-width shoulders. (See Attachment 4).

**DESCRIBE ELEMENT(S) FOR DESIGN EXCEPTION(S)**

(Attach additional sheets as needed)

Due to the widening of I-20 in the area of the 36' wide median, the shoulder width at US 1 around bridge piers that support the overpass will be narrower than AASHTO's 4' minimum requirement on the left and less than 10' on the right. Based on survey data and existing plans, the proposed shoulder width will be reduced to 2'9" on the inside and 6'0" on the outside.

#### JUSTIFICATION FOR DESIGN EXCEPTION(S)

A vast majority of interstate miles within urban areas have median widths of 36' on four lane divided highways. In order to minimize construction impacts, right of way impacts, disruption of traffic for longer periods, and minimize construction costs, adding additional lanes into the 36' median is a consistent practice. There was no increase in crash frequency at interchanges along I-20 with similar shoulder width reductions based on review of crash data.

#### DESCRIBE STEPS TO ELEMINATE DESIGN EXCEPTION(S), INCLUDE COST

(Attach additional sheets as needed) \_\_\_\_\_

In order to eliminate the design exception, the inside shoulder width at US 1 would need to be a minimum of 4' (AASHTO) or 10' to meet SCOT requirements. The outside shoulder width at US 1 would need to be 10' (AASHTO) or 12' (SCDOT). The additional width would require replacing US 1 overpassing structure. The estimated cost to rebuild US 1 overpass is \$16,000,000.

#### HOW WILL FUTURE CONSTRUCTION IMPACT DESIGN EXCEPTION(S)?

(Attach additional sheets as needed) \_\_\_\_\_

Any additional lanes (4 in each direction) constructed within this corridor would require reconstruction of the overpass. At that time, the overpass could be reconstructed to provide appropriate widths for shoulders.

BRIDGE PLANS ID	SHEET NO.

**I-20 FUTURE TYPICAL SECTION  
SHOWING HORIZONTAL CLEARANCE  
REQUIREMENTS UNDER NEW OVERPASSES**

- ★ Permissible location of traffic face of barrier used to protect a wall or bridge substructure
- ★★ Permissible location of bridge column with protection barrier

Notes:  
Cross slopes and finished grades  
will vary based on final design.

NOTES:

SEE CROSS SECTIONS FOR LOCATIONS OF DIFFERENT CROSS SLOPES.

LONGITUDINAL JOINT SHALL BE 2' FROM OUTSIDE EDGE OF TRAVELWAY.

SEE PLANS &amp; ROADWAY STRUCTURE PLANS FOR LOCATIONS OF DIFFERENT BARRIER TYPES AND DETAILS.

NOTE:  
SEE SCDOT STANDARD DRAWING SECTION 805-800 FOR DETAILS OF PERMANENT CONCRETE MEDIAN BARRIER CONSTRUCTION.  
SEE PLANS FOR LOCATIONS OF CONCRETE MEDIAN BARRIER

CONDITION A: TO BE USED WITH GRADE SEPARATIONS LESS THAN 6".  
SEE STANDARD DRAWING 805-805-01 TO 805-810-02  
(EFFECTIVE DATE JANUARY 2016)

CONDITION B: TO BE USED WITH GRADE SEPARATIONS FROM 6"-18".  
SEE STANDARD DRAWING 805-805-01 TO 805-810-02  
(EFFECTIVE DATE JANUARY 2016)

CONDITION C: TO BE USED WITH GRADE SEPARATIONS GREATER THAN 18".  
SEE SHEET S-1 FOR DETAILS

EXTEND FULL DEPTH PAVED SHOULDER TO FACE OF CONCRETE BARRIER.  
SEE PLANS FOR LOCATIONS OF CONCRETE BARRIER  
THE FOLLOWING REQUIREMENTS APPLY TO THE DETAILS OF STANDARD DRAWINGS 805-810-01 AND 805-810-02:

- DETAIL 4, 5, & 15 - ALIGN BARRIER EXPANSION JOINTS WITH RIGID PAVEMENT EXPANSION JOINTS WHILE MAINTAINING THE JOINT SPACING LIMITATIONS OF BOTH STRUCTURES

- ALL OTHER DETAILS - EITHER ISOLATE THE BARRIER FROM RIGID PAVEMENT BY PLACING A BOND BREAKER AT THE INTERFACE BETWEEN THE RIGID PAVEMENT AND THE BARRIER FOUNDATION, OR ALIGN EXPANSION JOINTS IN BARRIER WITH PAVEMENT EXPANSION JOINTS WITHIN THE JOINT SPACING LIMITATIONS OF BOTH STRUCTURES. IF BOND BREAKER IS USED, SEAL THE TOP OF THE JOINT WITH A SILICONE SEALANT HAVING A WIDTH OF 3/8 INCH.

USE THIS TYPICAL SECTION:  
FROM STATION 223+67.00 TO STATION 535+16.00 I-20 EASTBOUND & WESTBOUND LANES

TABLE OF TOTAL SHOULDER WIDTHS FOR OVERPASS BRIDGES  
(PAVE ENTIRE SHOULDER WIDTH)

OVERPASS BRIDGE RD./RTE.	INSIDE SHOULDER *	OUTSIDE SHOULDER **
S-106 (MINERAL SPRINGS RD.)	4.00'	10.00'
U.S. RTE. 1	3.00'	8.00'
S-167 (CEDARCREST DR.)	4.00'	10.00'
S.C. RTE. 6 (SOUTH LAKE DR.)	4.00'	10.00'

BASE OPTION 3

▲ USE SILT FENCE AT THE TOE OF ALL SLOPES PER STD. DWG. 815-605-00

● ADD 3.5 FEET TO SHOULDER WIDTH WHEN GUARDRAIL IS REQUIRED. SEE PLANS AND CROSS SECTIONS FOR LOCATIONS. PROVIDE PAVING UNDER THE GUARDRAIL ADJACENT TO PAVED SHOULDER UTILIZING HMA SURFACE TYPE B AT A RATE OF 300 PSY.

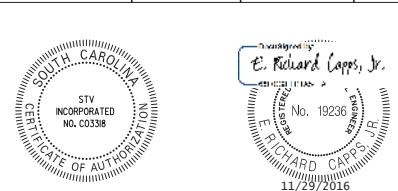

■ USE 6:1 SLOPE (0'-5')  
4:1 SLOPE (5'-10')  
2:1 SLOPE (10'-OVER)

‡ PLACE MILLED IN RUMBLE STRIPS IN ACCORDANCE WITH STD. DWGS. 401-205-01 AND 401-205-02

⊗ THIS SLOPE MAY BE VARIED WHEN A DEEPER DITCH IS NECESSARY FOR DRAINAGE PURPOSES, USING A MINIMUM SLOPE OF 12:1 AND A MAXIMUM SLOPE OF 4:1. WHERE A DEEPER DITCH THAN PROVIDED BY A 4:1 IS NECESSARY, THE DITCH SHALL BE PLACED FARTHER FROM THE Q CONTINUING THE 4:1 SLOPE TO PROVIDE FOR THE NECESSARY DEPTH. SEE CROSS SECTIONS FOR THE SPECIAL DITCH GRADES.
